PIPAC TRAINING WORKSHOP OVERVIEW

Pressurized intraperitoneal aerosolized chemotherapy (PIPAC) is an innovative treatment for patients with peritoneal metastases originating from gastrointestinal and ovarian cancers-conditions for which effective therapies are limited. PIPAC is delivered during standard laparoscopy. The International Society for the Study of Pleura and Peritoneum (ISSPP) oversees certification and quality assurance for this procedure. Surgeons are recommended to complete a dedicated training program.

PIPAC is an emerging and promising treatment for patients with peritoneal metastases from gastrointestinal and ovarian cancers. As a relatively new approach, this marks only the third PIPAC training course in the United States designed to train and certify practitioners in its administration.

WORKSHOP HIGHLIGHTS

- Day One: Didactic lectures and videos
- Day Two: Dry lab simulation with lectures followed by hands-on exposure to aerosolizer and equipment
- Course exam and certification

TARGET AUDIENCE

Colorectal and general surgeons, surgical oncologists, gynecologic oncologists, fellows-in-training, medical oncologists, other medical personnel interested in assisting with pressurized intraperitoneal aerosolized chemotherapy care (pharmacists, anesthesiologists, operating room registered nurses).

REGISTRATION FEES

Physician/Non-Physician – \$1200

Fellow/Trainee – \$600

Fees include:

Breakfast and Lunch Day One

****Meet the faculty reception****

and Breakfast Day Two
